Library is oligo-dr primed and directionally cloned (EcoRV site is destroyed upon cloning). Average insert size 1.5 kb, insert size range 1-2.5 kb. Library is normalized and enriched for full-length clones and was constructed by C. Gruber (Invitrogen). Research Genetics tracking code 025. Note: this is a NIH_MGC Library."

The polypeptides can also be used as a food additive or preservative to continuence in the polypeptides are useful for chromosome identification. They are also useful as probes for contents of the present and ovarian cancer. They are also useful in the gene content preservation are useful in the gene content of preservation are useful in the gene content of the present invention are useful in the gene content of the present invention are useful in the content of cancer, immune discretes, cardiovascular disorders, wound healing, neurological diseases and confectious disease. AAC59957 to AAC59955 and AAB34772 represents sequence used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  US-09-820-003B-2 (1-173) x AAC60009
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Fifty nucleic acid molecules encoding human secreted proteins, useful in the prevention, treatment and disgnosis of cancer, immune disorders, cardiovascular disorders and neurological diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Rosen

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              망
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     γQ
This sequence encodes a human Rab protein of the invention, designated CC RABP-2. The Rab proteins, RABP-1, RABP-2 and RABP-3 are involved in CC vesicle trafficking, cell function, and cell differentiation. The RABP CC polypeptides, DNAs and agonists can be used to prevent or treat a consider associated with an increase in appotosis, e.g. infectious or CC genetic immunodeficiencies, neurodegenerative diseases such as Alzheimer's disease, Parkinson's disease, amyotrophic lateral sclerosis, cretinitis pigmentosa, and cerebellar degeneration, myelodysplastic cretinitis pigmentosa, and cerebellar degeneration, myelodysplastic Syndromes such as aplastic anemia, ischaemic injuries such as wyocardial infarction, stroke, and reperfusion injury, toxin-induced diseases such as a cachexia, viral infections, and osteoporosis. They can consist such as cachexia, viral infections, and osteoporosis. They can consist to fight an infection or a cancer or to correct a correct and consist or Huntington's chorea. Antagonists can be used to prevent or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New purified human Rab proteins - used to develop products for treating e.g. AIDS, immunodeficiencies, neurodegenerative diseases, cancer, inflammation or autoimmune diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Rab protein; RABP-1; RABP-2; RABP-3; human; vesicle trafficking; cance; cell differentiation; apoptosis; immunodeficiency; cell proliferation; neurodegenerative disease; myelodysplastic syndrome; wasting disease; toxin-induced disease; infection; genetic defect; diagnosis; therapy;

                                                                                                                                                                                                                       antidiabetic; antiinflammatory; antiulcer; vulnerary; anticonvulsant; anticonvulsant; anticonvulsant; anticonvulsant; anticonvulsant; The antibacterial; antifungal; antiparasitic and cardiant activity. The polynucleotide and protein sequences are used in the diagnosis of cancer, particularly breast and ovarian cancer. The nucleic acid sequences, proteins, agonists and agonists may also be used in the diagnosis, prevention and treatment of immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, allergies, autoimmune colitis; cardiovascular disorders such as myocardial ischaemias; wound healing; neurological diseases such as
                                                                                                                                                                                                                                                                                                                                                                                          Sequences AAF21614 - AAF22031 represent DNA sequences encoding human proteins AAB58711 - AAB59128. The DNA and protein sequences are associated with breast and ovarian cancer. Included in the invention are sequences AAF22032 - AAF22040 and AAB59129 which are used in the isolation and characterisation of the DNA and protein sequences of the invention. The breast and ovarian cancer associated DNA, protein, agonist or antagonist sequences exhibit cytostatic; immunosuppressive; noutropic; neuroprotective; antiviral; antiallergic; hepatotropic;

The invention relates to novel isolated human secreted polypeptides (I) cand polynucleotides (II). (I) and (II) are useful for treating the financiary conditions such as arthritis, nephritis. Croin's disease, considered in increasing haematopolesis, stemure responses, and is converted in increasing haematopolesis, stem cell survival, bone growth converted in increasing haematopolesis, stem cell survival, bone growth converted in increasing haematopolesis, stem cell survival, bone growth converted in increasing haematopolesis, stem cell survival, bone growth converted in increasing haematopolesis, stem cell survival, bone growth converted in increasing haematopolesis, stem cell survival, bone growth converted in the polypeptides of the polypeptides of the polypeptides of the polypeptides of the polypeptides. Converted in the polypeptides in the polypeptides in a train this sue and is useful for studying modulators of the polypeptides. Converted in induces the proliferation of neural cells and regeneration of nerve converted in the polypeptides. Converted in the polypeptides in the polypeptides in the polypeptides in the polypeptides. In addition, (I) is involved in chemotactic or chemokinetic converted in the polypeptides in the polypeptides in the polypeptides. Converted in the polypeptides in the polypeptides in the polypeptides in the polypeptides. Converted in the polypeptides in the polypeptides in the polypeptides in the polypeptides. In addition, (I) is also useful for treating mysloid converted in the polypeptides in the polypeptides. In addition, the polypeptides in the polypeptides. In addition, the polypeptides in the polypeptides in the polypeptides. In addition, the polypeptides of the polypeptides in the polypeptides. In addition, the polypeptides in the polypeptides in the polypeptides in the polypeptides. In addition, (I) is also useful for treatment of lung or liver fibrosis, the polypeptides in the polypeptides in the polypeptides in the polypeptides in the polypeptides. In addition, (I) affect
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Tang

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to human polynucleotides (AAI79941-AAI93841) and the encoded proteins (AA000010-AA013910) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, hammanomodulatory activity and activity, tissue growth factor activity, immunomodulatory activity and activin/inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Note: The sequence data for this patent did not form specification, but was obtained in electronic format at ftp.wipo.int/pub/published_pct_sequences.

                                                                                Ş
                                                                                                                                                                                                                                        US-09-820-003B-2 (1-173) x AAS34668
                                                                                                                                                                                                                                                                      The invention relates to novel nucleic acids encoding novel human foetal CC antigens. The nucleic acids and proteins are used to prevent, treat (e.g. by gene therapy) or ameliorate a medical condition in e.g. humans, mice, CC by gene therapy) or ameliorate a medical condition in e.g. humans, mice, CC rabbits, yoats, horses, cats, dogs, chickens or sheep. They cC are also used in diagnosing a pathological condition or susceptibility CC to a pathological condition. The antibodies to the antigens can also be used in alleviating symptoms associated with the disorders and in CC immunosorbent assays (ELISA). Disorders which are diagnosed or treated include autoimmune diseases e.g. rheumatoid arthritis.

CC cardiovascular disorders e.g. neoplasms of the breast or liver, CC cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, provides and fungi and ocular disorders e.g. corneal infection. The polypeptides can also be used to aid wound healing and epithelial cell proliferation, to regenerate tissues and in chemotaxis. The polypeptides can also be used to subditive or preservative to increase or decrease storage capabilities, fat content, lipid, protein, carbohydrate, vitamins, contents and other nutritional components. Numerous

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIG176-ABLIG1511), expressed DNA sequences (ABLIG175) and the encoded proteins

                                                                                                                                       Alignment Scores:
                                                                                                                                                                                                                                           The present invention describes a method for monitoring differential converges of the same genes in one or more second filamentous fungal (FF) cell relative to expression of the same genes in one or more second filamentous fungal cells. The method uses fluorescence-labeled nucleic acids isolated from the FF cells and a substrate of expressed sequence tags (EST). The ESTs care used in the methods for monitoring differential expression of genes care used in the methods for monitoring differential expression of the global expression of genes from FF cells allows the production of the global expression of genes from FF cells allows the production of the global expression of genes from FF cells allows the production of the global expression of genes from FF cells allows the production of the global expression of genes from FF cells allows the production of the global expression of genes from FF cells allows the production of the global expression of unknown open reading frames can be discovered, possible functions of unknown open reading frames and be consisted and gene copy number variation and stability can be monitored. The expression of genes can be used to study how FF cells adapt to changes in culture conditions, environmental stress, sporre compination, metabolic or catabolic pathway compinering. Single Establishment of the gene products to facilitate considerable some gene or open reading frame, and organisation of the gene products to facilitate considerable some gene or open reading frame, and organisation of the gene products to facilitate considerable some gene products to facilitate analysis of the results. AAF01478 to AAF147 represents ESTs from Aspergillus organe; and the present invention reseal, which are call sneed from the present invention are seed, which are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            expressed sequence tag; Fusarium venenatum; Aspergillus niger; Aspergillus oryzae; Trichoderma reesel; identification; recombination; culture condition; environmental stress; spore morphogenesis; metabolic pathway engineering; catabolic pathway engineering; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              cc polypeptide (II) sequences. (I) is useful as hybridisation probes, cc polymerase chain reaction (PCR) primers, oligomers, and for chromosome cc and gene mapping, and in recombinant production of (II) The complete cc polynucleotides are also used in diagnostics as expressed sequence tags cc for identifying expressed genes. (I) is useful in gene therapy techniques cc (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical company of sites expressing (II). (I) and (II) are useful for treating cc disorders involving aberrant protein expression or biological activity. Cc The polypeptide and polynucleotide sequences have applications in cc diagnostics forensics, gene mapping, identification of mutations cresponsible for genetic disorders or other traits to assess biodiversity cand to produce other types of data and products dependent on DNA and cc amino acid sequences. AAS64197-AAS94564 represent novel human cc diagnostic coding sequences of the invention. Cc usefication, but was obtained in electronic format directly from WIPO cc at fip.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity
